Seaboard Corporation · 249 trading days · Updated 2026-04-15

DAILY VERDICT

2026-04-15

SEB fell 2.8%, driven primarily by SEB-specific factors. The broad market (S&P 500) was up 0.8%. SEB underperformed the market by 3.5% -- company-specific signal. Accumulation score elevated at 75/100.

CLOSE	RETURN	VOLUME	20D AVG VOL	ACCUM SCORE

/ 100

Strong Accumulation

Composite signal from OBV trend, A/D line, price-volume correlation, and volume regime elevation over 20-day window.

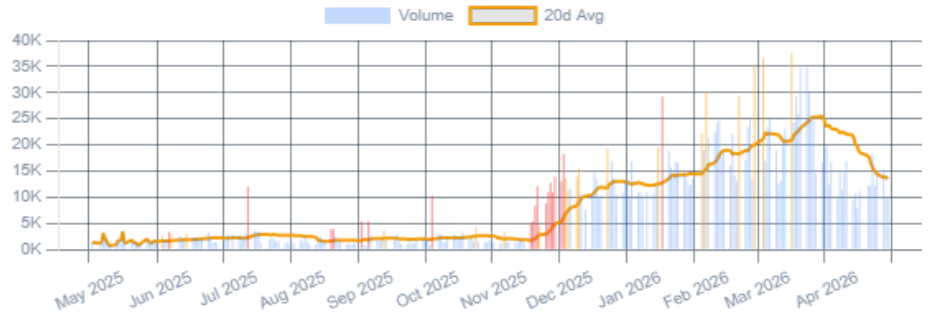
OBV Trend | A/D Line | Price-Vol

Vol Regime

VOLUME REGIME ANALYSIS

REGIME SHIFT	AVG VOLUME
8.9x	8,584

Compares avg daily volume of last 60 trading days to first 60 trading days. A shift > 2x indicates a structural change consistent with accumulation.



WHO'S BUYING?

INFERRED FROM DAILY DATA **ACCUMULATION PROFILE**

Institutional (Active)

Elevated volume with moderate consistency. Pattern suggests active institutional buying, possibly multiple buyers with overlapping timelines.

Pattern began around 2025-11-14 with daily volume shifting from a pre-period baseline to a sustained 17,174 shares/day (median 14,900, range 7,600-37,600). Over 103 trading days, price moved from $4,118.34 to $5,591.43 (+35.8%). 56% of total volume occurred on up-days (above 55% = buying bias). Volume consistency CV is 40% (below 80% = systematic, above 100% = sporadic). Net estimated share accumulation (up-volume minus down-volume proxy): 225,200 shares.

SINCE	TRADING DAYS	PRICE MOVE	UP-VOL RATIO	PERSISTENCE	VOL CONSISTENCY	EST NET SHARES
2025-11-14	103	+35.8%	56%	36%	CV 40%	225,200

KNOWN / FILED **LAST DISCLOSED POSITIONS (Q4 2025 13F)**

Institutional holders with >$100M AUM are required to file 13F quarterly (45-day delay). This data reflects positions as of Dec 31, 2025. The accumulation pattern began around 2025-11-14 -- current positions are unknown until Q1 2026 13F filings are published.

Q4 2025: 15 net buyers, 15 net sellers among institutional holders. See tables below for details.

BLIND SPOTS **WHAT THIS APP CANNOT SEE**

X **Institutions under $100M AUM** -- no 13F filing required. Completely invisible to public data.
Potential fix: Bloomberg DL intraday trade-size clustering could distinguish institutional block trades from retail flow.

X **Family offices** -- exempt from 13F since Dodd-Frank (2011). SEB is exactly the type of illiquid, high-value stock family offices favor.
Potential fix: No public data solution. Relationship-based intelligence only (IR outreach, prime broker channels).

X **Foreign institutions** -- no US filing obligation unless crossing 5% ownership.
Potential fix: Monitor international regulatory filings; Bloomberg DL global ownership data may surface non-US holders.

X **Sub-5% accumulators** -- no 13D/13G triggered until the 5% threshold (~47,900 shares of float). Someone could accumulate ~$200M+ worth without any disclosure.
Potential fix: None from public data. Watch for 13D/13G filings; this app monitors EDGAR in real-time.

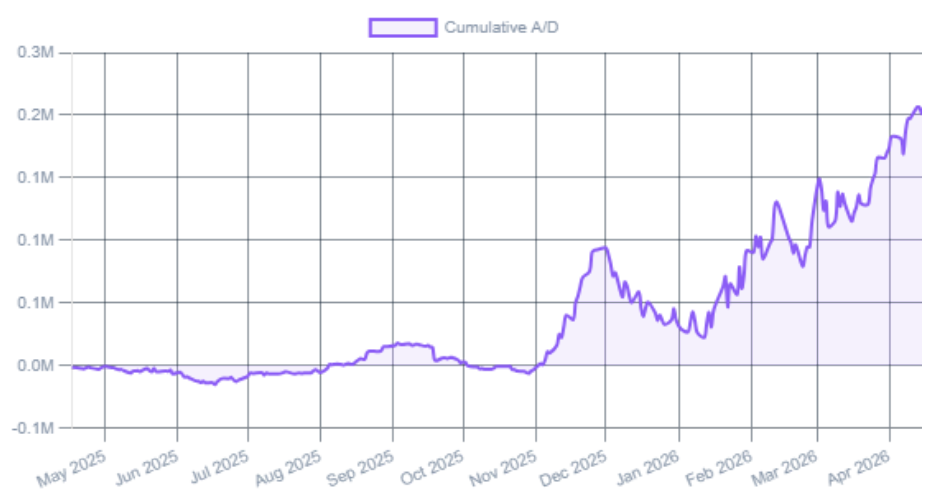
X **Multiple-account strategies** -- a single entity using multiple brokers/accounts to stay below reporting thresholds.
Potential fix: Trade pattern analysis from intraday data (Bloomberg DL) can sometimes identify correlated execution patterns.

X **Retail investors** -- never required to file. However, SEB's $5,000 price point and low liquidity make significant retail accumulation unlikely.
No fix needed -- retail is unlikely to drive sustained 8.9x volume increase at this price level.

ON-BALANCE VOLUME (OBV)

OBV adds volume on up-days, subtracts on down-days. Rising OBV + rising price = accumulation confirmation.

ACCUMULATION / DISTRIBUTION LINE



Weights volume by where price closes within the day's range. Closing near highs on heavy volume = buying pressure.

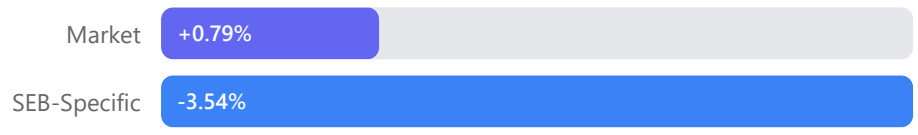
TODAY'S CAUSE BREAKDOWN



Market = S&P 500 return. SEB-Specific = everything beyond the market move.

Note: Seaboard is a diversified conglomerate (pork, commodity trading, milling, marine transportation). No single sector ETF is an appropriate peer. The decomposition chart below uses Consumer Staples (IYK) as a *rough reference only* -- it does not represent Seaboard's true sector exposure and should not be cited in board communications.
